Aeon is not another front end system. Really.

Other systems are about description and discovery.

But Aeon is about fulfillment.

Some systems help you catalog and make objects discoverable within your institution or on the Web. Others manage the creation of the repositories in which objects can be digitally stored, searched, and found.

Aeon unites these systems to help meet the challenges of delivering better service to researchers, improving collection security, and gathering meaningful statistics to support the assessment needs of today's institutions.
